Product Description

Stihl HT134 Pole Pruner

The STIHL HT 134 is a powerful pole pruner that features a seven foot fixed-length shaft and a field-proven, tough metal gearbox, with a durable metal branch hook. The guide bar mounted on the outside of the gearbox, the 3/8" STIHL PICCO™ Micro™ Mini saw chain, and a 14" guide bar allow the HT 134 to take on tougher jobs. This pruner also features a vertical pleated air filter, a large fuel tank, and simplified starting and one-touch stopping. If you are a tree care professional, the HT 134 pole pruner has what you need to power through your day.

- **3/8" STIHL PICCO™ Micro™ Mini saw chain (61 PMM3) -**

A durable saw chain that sharpens easily and delivers fast, smooth, clean cuts with reduced vibration compared to the previous model.

- **One-touch Stop Button -**

Users can save time and reduce the chance of flooding thanks to the one-touch stop button, which allows the engine to be shut off with the simple press of a button.

- **Semi-Automatic Choke Lever -**

The semi-automatic choke lever enables the simplified three-step start procedure, saving users time and allowing them to start jobs faster.

- **Vertical Pleated Paper Air Filter -**

Thanks to better air filtration due to its greater surface area, the vertical pleated paper air filter can extend the time between servicing.

- **Tough metal gearbox with durable metal branch hook -**

The new lightweight gearbox design provides high-speed precision while pruning, allowing for easy handling when reaching for high branches

- **IntelliCarb™ Compensating Carburetor -**

The IntelliCarb™ Compensating Carburetor is designed to automatically adjust the air/fuel ratio when the air filter becomes restricted or partially clogged and maintains the engine's correct RPM.

IntelliCarb™ uses air from the clean side of the air filter to control the diaphragm and flow of fuel. As their air filter becomes dirty and less air is available for the carburetor, the IntelliCarb™ system adjusts the fuel flow to compensate for the decrease in air flow. This is in contrast to typical carburetors that utilize the air from the "dirty" side of the air box.

- **Outboard Mounting of Guide Bar and Saw Chain -**

Outboard mounting of guide bar and saw chain allow for better flush cutting than other designs.

- **Balanced design -**

Balanced design makes it comfortable to use.

- **Made in America -**

A majority of STIHL products sold in America are made in America of U.S. and global materials.

- **Anti-Vibration System -**

STIHL has a system for minimizing the vibration levels of handheld outdoor power equipment. The STIHL anti-vibration system helps reduce operator fatigue and provides a more comfortable working experience.

- **Multi-Function Control Handle -**

Having easy access to all of the controls on one comfortable handle helps makes it easier to complete tasks so the operator's hand never has to leave the handle.

- **Purge Pump Primer -**

At the press of a button, this small fuel pump delivers fuel to the carburetor, reducing the number of starting pulls needed after an extended break between uses.
