Product Description

Stihl Chainsaw MS201CEM 16"

The MS 201 C-EM delivers high power and smart technology in a lightweight package. The added STIHL M-Tronic™ intelligent engine management system automatically adapts to changes in environmental factors such as fuel quality and altitude. The result is a reliable and fuel-efficient machine that performs optimally in a variety of conditions. In addition, the MS 201 C-EM features STIHL Easy2Start™ technology—making engine starting almost effortless. Farm and ranch jobs will be made easier with use of this well-balanced, low-vibration, and durable chainsaw.

- **Ematic™ Lubrication System -**

The Ematic™ guide bar, when used with STIHL OILOMATIC® saw chain, will provide proper lubrication and less oil consumption than conventional methods. The system works because two ramps, strategically placed in the guide bar rail, help contain the flow of oil and direct all lubrication to the sliding faces of the bar and chain links as well as the rivets and driver holes, which in turn can reduce bar oil consumption up to 50%.

- **STIHL Easy2Start™ (E) -**

The STIHL Easy2Start™ system makes starting STIHL outdoor power tools almost effortless, eliminating the need for a strong pull of the starting cord. This advanced starting system is designed to make starting STIHL products easier. The specific system may vary by model, but in each case, a quick pull overcomes the engine's compression to minimize the strength and effort required to start. Available on selected products.

- **STIHL M-Tronic™ -**

This product features M-Tronic™ (M) - a new generation of Intelligent Engine Management that eliminates the low and high speed carburetor adjustment screws, compensates for dirty air filter and changes in elevation and fuel quality for optimum engine power at all times.

- **STIHL Quickstop® -**

STIHL chainsaws are equipped with a chain stopping system designed to reduce the risk of injury in certain kickback situations. It is called a STIHL Quickstop® chain brake. The STIHL Quickstop® chain brake is designed to stop the rotation of the chain if activated by the operator's hand or by inertia if the saw kicks back with sufficient force. In some working positions, the STIHL Quickstop® chain brake can

be activated by inertia, stopping the chain within fractions of a second.

- **Adjustable Automatic Oiler -**

The Adjustable Automatic Oiler allows the user to adjust the lubricant of the guide bar and saw chain for different bar lengths and cutting conditions.

- **Bumper Spikes -**

These spikes prevent pull-in and provide better control, making cutting easier.

- **Translucent Fuel Tank -**

The semi-transparency allows operators to easily check the fuel level before starting work.

- **Toolless Fuel and Oil Caps with Retainers -**

Simply lift the lever and twist the caps to remove or tighten. There's no need to use a tool to tighten or loosen.

- **Side-Access Chain Tensioner -**

The side-access chain tensioner makes it much more convenient for the user to adjust the saw chain with a bar wrench as opposed to the typical location of the guide bar adjustment screw.

- **Anti-Vibration System -**

STIHL has developed a system for minimizing the vibration levels of handheld outdoor power equipment. The STIHL anti-vibration system helps reduce operator fatigue and provides a more comfortable working experience.

- **Throttle Trigger Interlock -**

This safety feature must be depressed before the trigger can be activated.

- **High-Tech Polymer Housings -**

Housings are lightweight, durable, and corrosion resistant.
